Cooperative study programme in the Departments of Food Technology, Applied Computer Science, Electrical Engineering and Information Technology

Science and Engineering
Bachelor’s degree (BSc / BEng)
accreditation pending

New Bachelor’s degree programme

Winter semester 2016/17

Hochschule Fulda
University of Applied Sciences
We look forward to meeting you!
University studies in the heart of Germany

What does it cover?

The first two semesters of the study programme provide an interdisciplinary introduction to three fields of engineering: Applied Computer Science, Electrical Engineering, and Food Technology. Students thus become familiar with different subject disciplines and acquire foundational skills. In the third semester students specialise in one of the above areas. The study programme is suitable for international and German applicants, particularly those with a migration background.

The foundational programme is taught in English. This makes it easier for international students to embark on their studies, while the language skills of German students are furthered.

Linguistic, intercultural, social and cultural skills are taught in addition to subject-related knowledge.

Where does it lead?

The study programme prepares students for work in an international environment. Graduates will have acquired skills in the planning, processing and analysis of tasks and problems in the field of engineering.
